

## *Fence System*

---

We have fence kits to suit all types of dogs. Heavy Duty fencing is recommended for most dog enclosures.

Standard fencing is suitable for smaller dogs. Black nylon tension cable can be used along the top of the fence to give added protection from falling tree branches, heavy snow load and ice storms. The cable is attached to the fence with hog rings.

The post and sleeve system is fitted with eye bolts to support the nylon tension cable and give increased winter protection.

PVC coated steel wire ties are used to attach the fence to our metal posts.

Trees are an economical support for our fence material and we have a unique double clip to support the mesh. The clip is simply attached to the tree or wooden post with deck screws. The mesh is then hung on the clip. A second clip is fixed at the bottom of the post or tree to hold the mesh down.

To prevent pets from digging or crawling under the fence we recommend it should be securely fixed to the ground every few feet with our ground stakes. These have a lightning bolt shape to give maximum grip in the ground.

The other great advantage of the system is it can be dismantled and taken with you if you move home.

To deter beaver, muskrats, groundhogs, rabbits and other gnawing creatures we have chew guard which is installed along the bottom of the fence. It is black PVC coated wire that cannot be chewed and matches the main fence material.

## INSTALLATION

---

Installation of our fence is very simple, you do not need to be an experienced fence installer to do the job. The simplest and fastest way is to attach the mesh to mature trees surrounding your property. Where mature trees are not present, we supply black powder coated steel posts (but any other type of post can be used). Each post comes with a galvanized sleeve that is driven into the ground. When the post is inserted into the sleeve it will be exactly the correct height off the ground for the fence.

### **Cautionary Note.**

Best Friend Fence is not recommended as a round-the-clock kennel/dog containment system. Although it may work in this manner for more docile/non-aggressive dogs, it is primarily designed as a humane way to keep your dog on your property. **DO NOT** leave your dog unsupervised for hours. If your dog likes to chew or becomes bored he/she could escape by damaging or jumping the fence.

For the vast majority of dogs our product performs incredibly well.

Best Friend Fence is not recommended for goats.

## BEST FRIEND DOG FENCE

---

*Keeping pets safe outdoors*

*Virtually Invisible*

*Easily attaches to trees or posts*

*Completely safe non-electric*

*Cost Effective, Long Lasting*

## Allowing pets outside?

Keeping pets safe outside is an increasing problem. Pets are inquisitive and naturally want to explore beyond the garden. Many neighbours object to dogs or cats trespassing on their property.... they do not love your pets the same as you. Keeping your pets on your own property is good way to remain friends with your neighbours.

Some municipalities have bylaws dictating that pets should be contained on their own property.

Letting pets roam onto the street is dangerous and many end up being killed or badly injured by vehicles.

In rural areas coyotes, fishers etc see your small pet as an easy meal.

### *The Solution.*
